class people.**User**

Represents user details (email, username, balance, etc.)

static create (*args, **kwargs)

Creates a new User instance.

Parameters

- **email** (*str*) – The new account’s email.
- **username** (*str*) – The new account’s username.
- **password** (*str*) – The new account’s password.

static profile ()

Retrieves the details of a given Profile instance.

class `people.Deposit`

A deposit into a user's account.

static `create(*args, **kwargs)`

Creates a new Deposit instance. Must visit <https://people-api-server.herokuapp.com/register> prior to set profile's stripeAccountId.

Parameters

- **stripeToken** (*int*) – A Stripe token representing a valid card.
- **amount** (*int*) – The amount of the deposit in cents.

static `list(*args, **kwargs)`

Retrieves all Deposit instances associated with the current user.

static `read(*args, **kwargs)`

Retrieves the details of a given Deposit instance.

Parameters **id** (*str*) – The id of the deposit.

```
class people.Transfer
```

```
    static create (*args, **kwargs)
```

Creates a new Transfer instance. Must visit <https://people-api-server.herokuapp.com/register> prior to set profile's stripeAccountId.

Parameters **amount** (*int*) – The amount of the transfer in cents.

```
    static list (*args, **kwargs)
```

Retrieves all Transfer instances associated with the current user.

```
    static read (*args, **kwargs)
```

Retrieves the details of a given Transfer instance.

Parameters **id** (*str*) – The id of the transfer.

```
class people.Query
```

```
    static create (*args, **kwargs)
```

Creates a new Query instance.

Parameters

- **text** (*str*) – The text to be included in the query.
- **regex** (*str*, optional) – A regex the response must match to be valid. Defaults to ‘.*’.
- **callback** (*str*, optional) – The url for the Response to be POSTed to. Defaults to None.
- **bid** (*int*, optional) – The bid price for the Response in cents. Defaults to 1.

```
    static get (*args, **kwargs)
```

Requests an unanswered Query compatible with the current user.

```
    static list (*args, **kwargs)
```

Retrieves all Query instances associated with the current user.

```
    static read (*args, **kwargs)
```

Retrieves the details of a given Query instance.

Parameters **id** (*str*) – The id of the query.

```
class people.Response
```

```
    static create (*args, **kwargs)
```

Creates a new Response instance.

Parameters

- **text** (*str*) – The text for the response.
- **query** (*str*) – The id of the target query.

```
    static list (*args, **kwargs)
```

Retrieves all Response instances associated with the current user.

```
    static read (*args, **kwargs)
```

Retrieves the details of a given Response instance.

Parameters **id** (*str*) – The id of the response.

```
class people.Rating
```

```
    static create (*args, **kwargs)
```

Creates a new Rating instance.

Parameters

- **satisfactory** (*bool*) – True if the response is satisfactory, False otherwise.
- **response** (*str*) – The id of the response.

```
    static destroy (*args, **kwargs)
```

Deletes a given Rating instance.

Parameters **id** (*str*) – The id of the rating.

```
    static list (*args, **kwargs)
```

Retrieves all Rating instances associated with the current user.

```
    static read (*args, **kwargs)
```

Retrieves the details of a given Rating instance.

Parameters **id** (*str*) – The id of the rating.

class `people.Attribute`

A key-value relationship representing a profile attribute. E.g. 'education': 'university of california, berkeley'

static `create(*args, **kwargs)`

Creates a new Attribute instance.

Parameters

- **key** (*str*) – The attribute tag.
- **value** (*str*) – The attribute value.

static `destroy(*args, **kwargs)`

Deletes a given Attribute instance.

Parameters **id** (*str*) – The id of the attribute.

static `list(*args, **kwargs)`

Retrieves all Attribute instances associated with the current user.

static `read(*args, **kwargs)`

Retrieves the details of a given Attribute instance.

Parameters **id** (*str*) – The id of the attribute.
